ResponseCompass

The right responder. The right fix.
Supervised by your control room.

THE PROBLEM

Closest is not best

01 **Nearest is not most experienced.**

The closest technician may never have fixed this fault.

02 **The first fix is often a guess.**

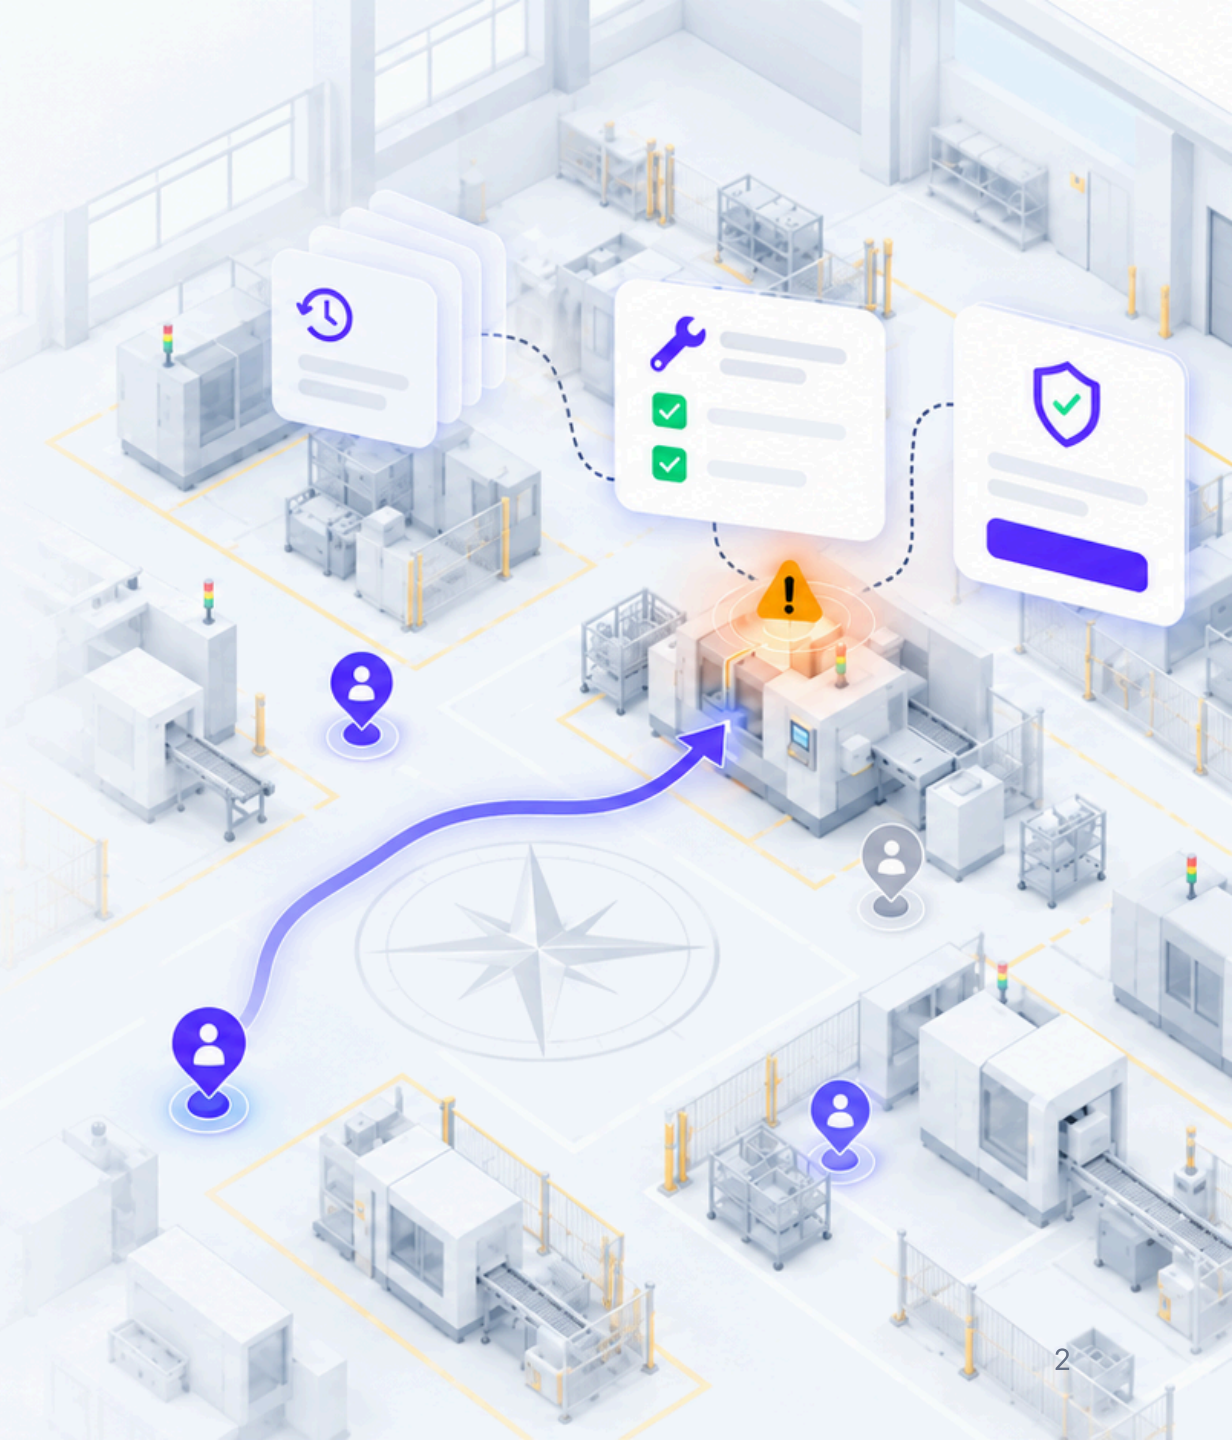

A wrong guess means a reopened issue and another trip.

03 **Backlogs force overtime calls.**

Who may legally stay on, and who covers the most work?

04 **Know-how is locked away.**

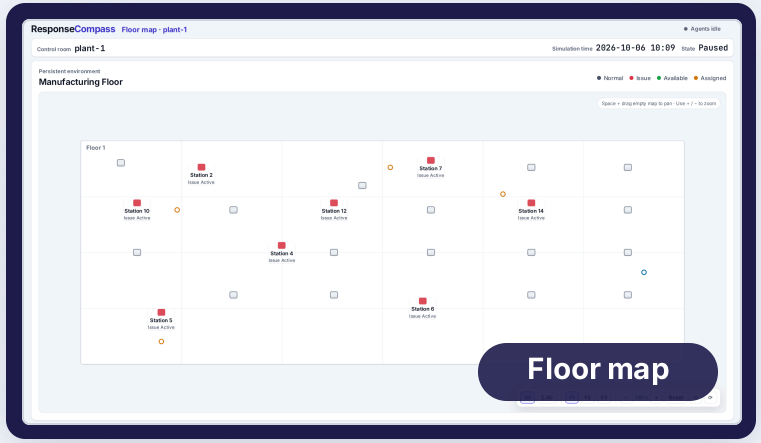

It lives in people's heads and old tickets, not in dispatch.

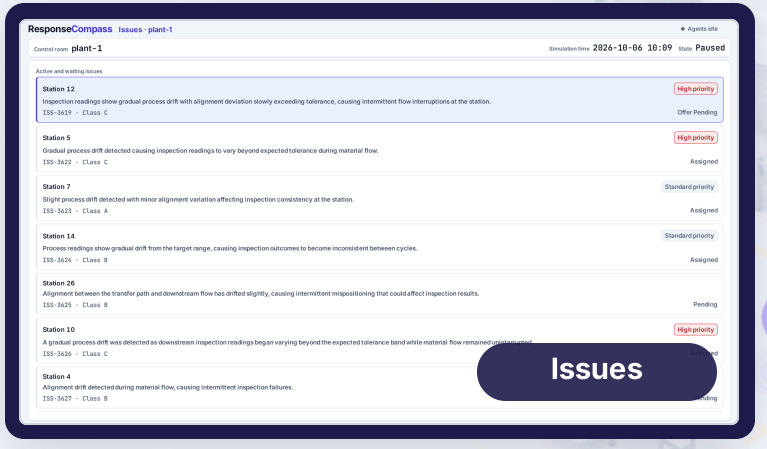

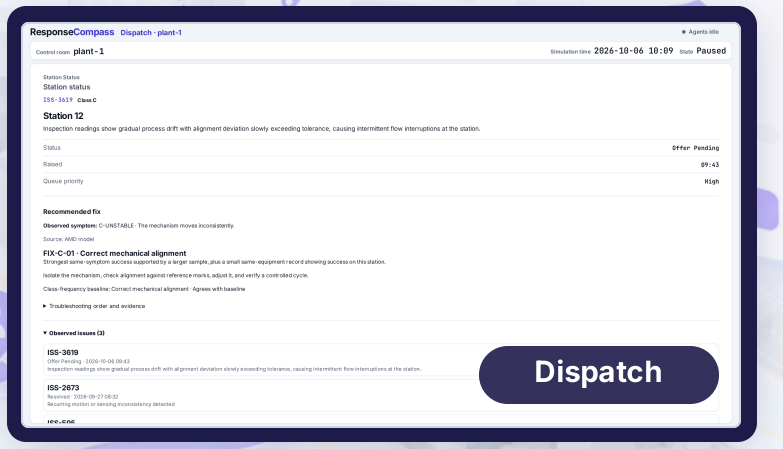

CONTROL ROOM

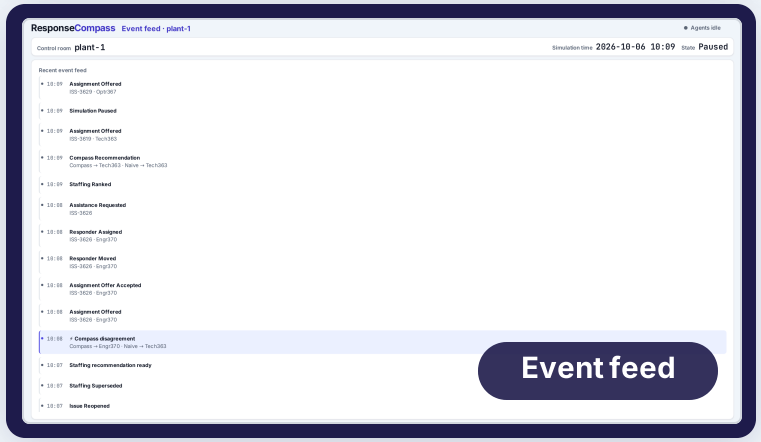

One agent, many screens

Each panel runs full screen on its own monitor; the operator console keeps the controls.

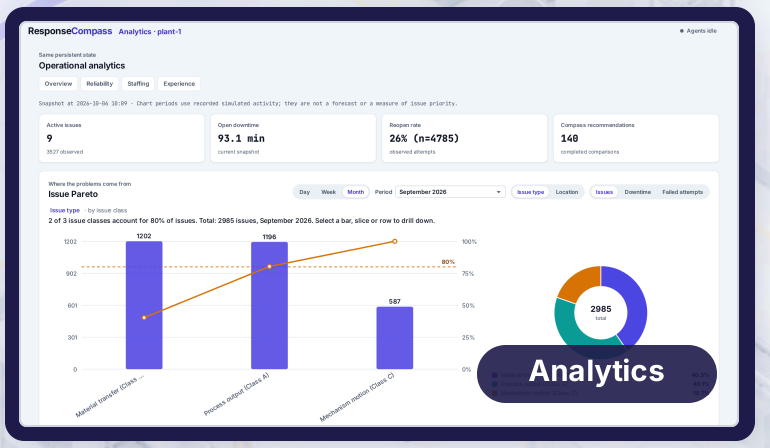

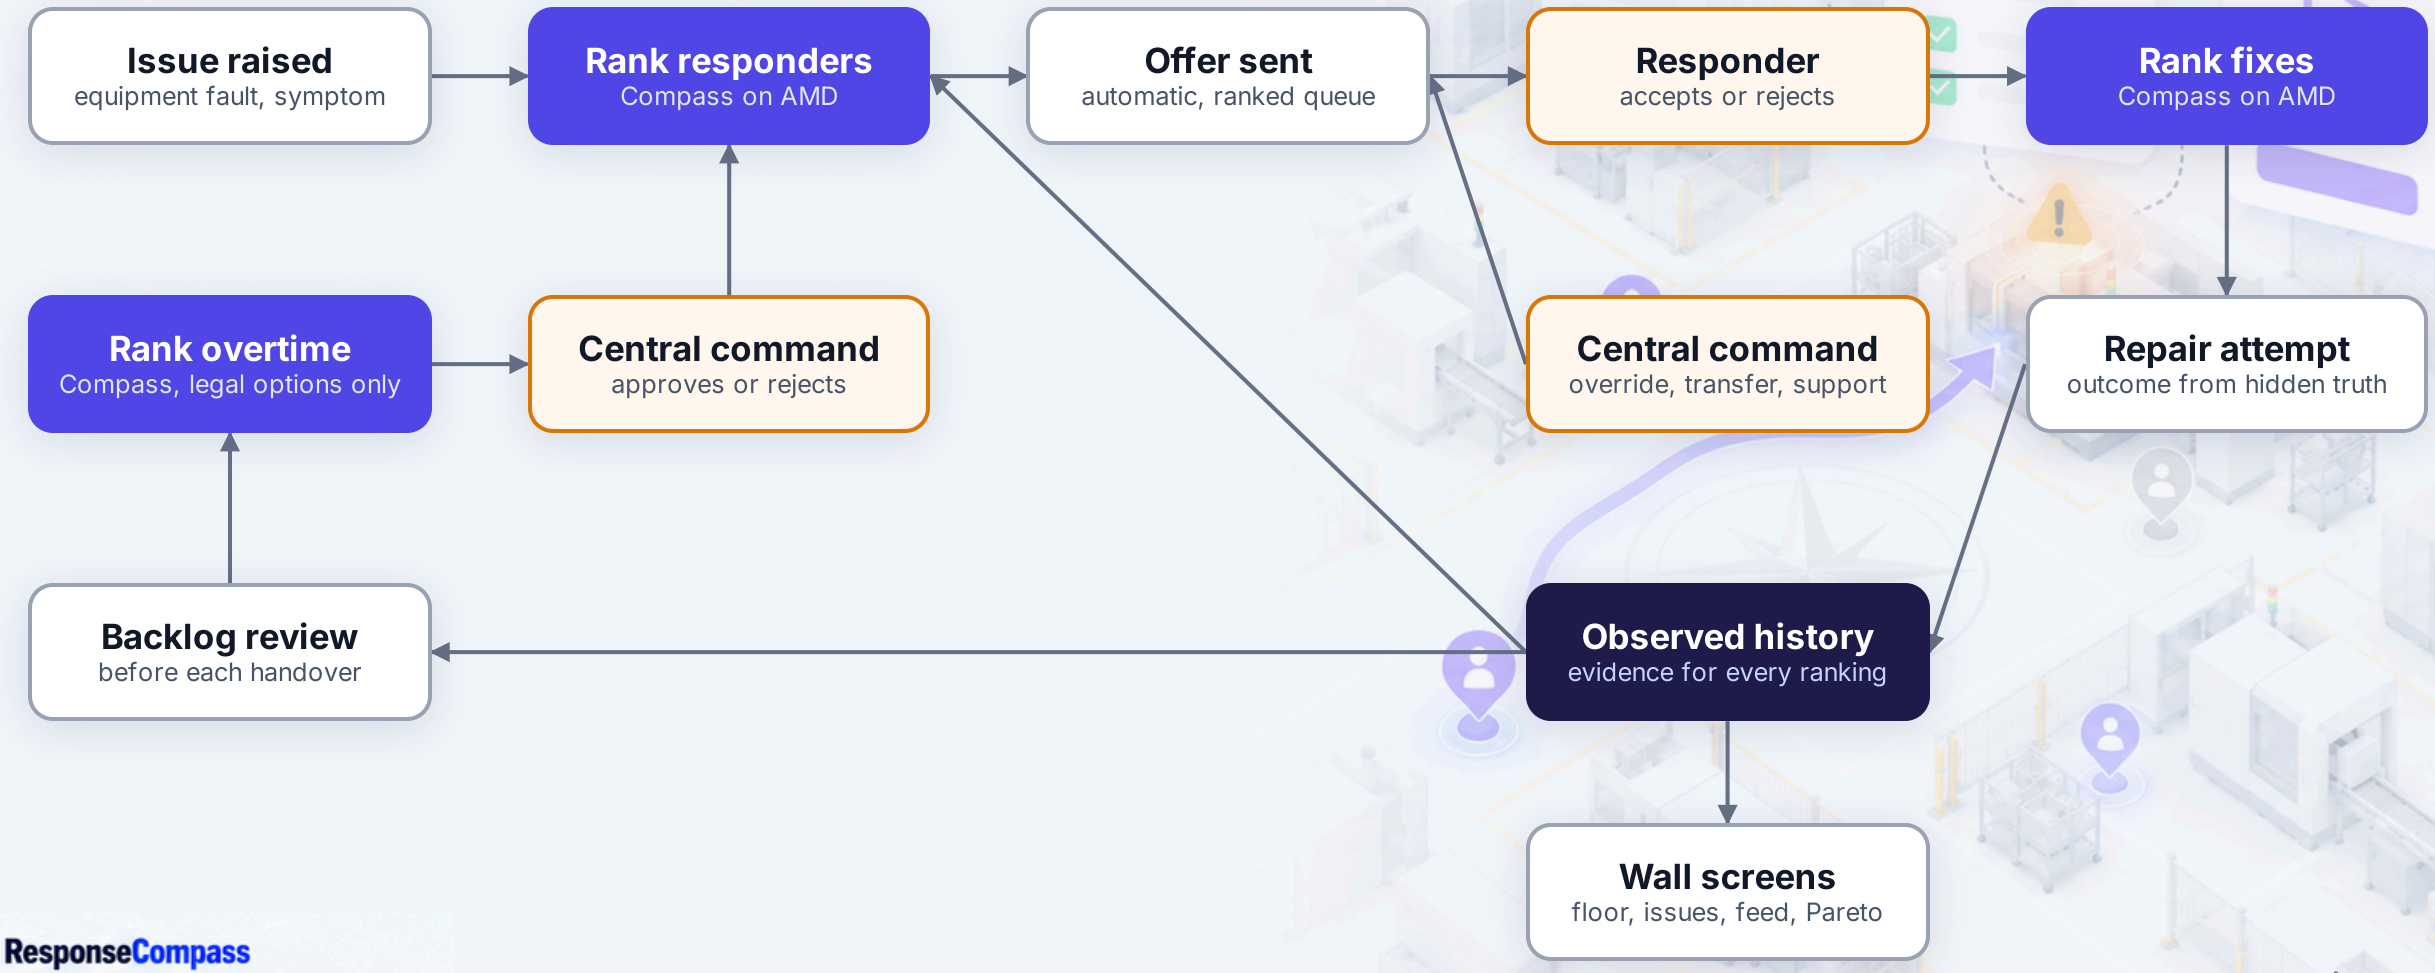

Application code · AMD model · Store · People

Autonomous by default, human in command

Code runs the loop; AMD models rank; people decide at the amber steps.

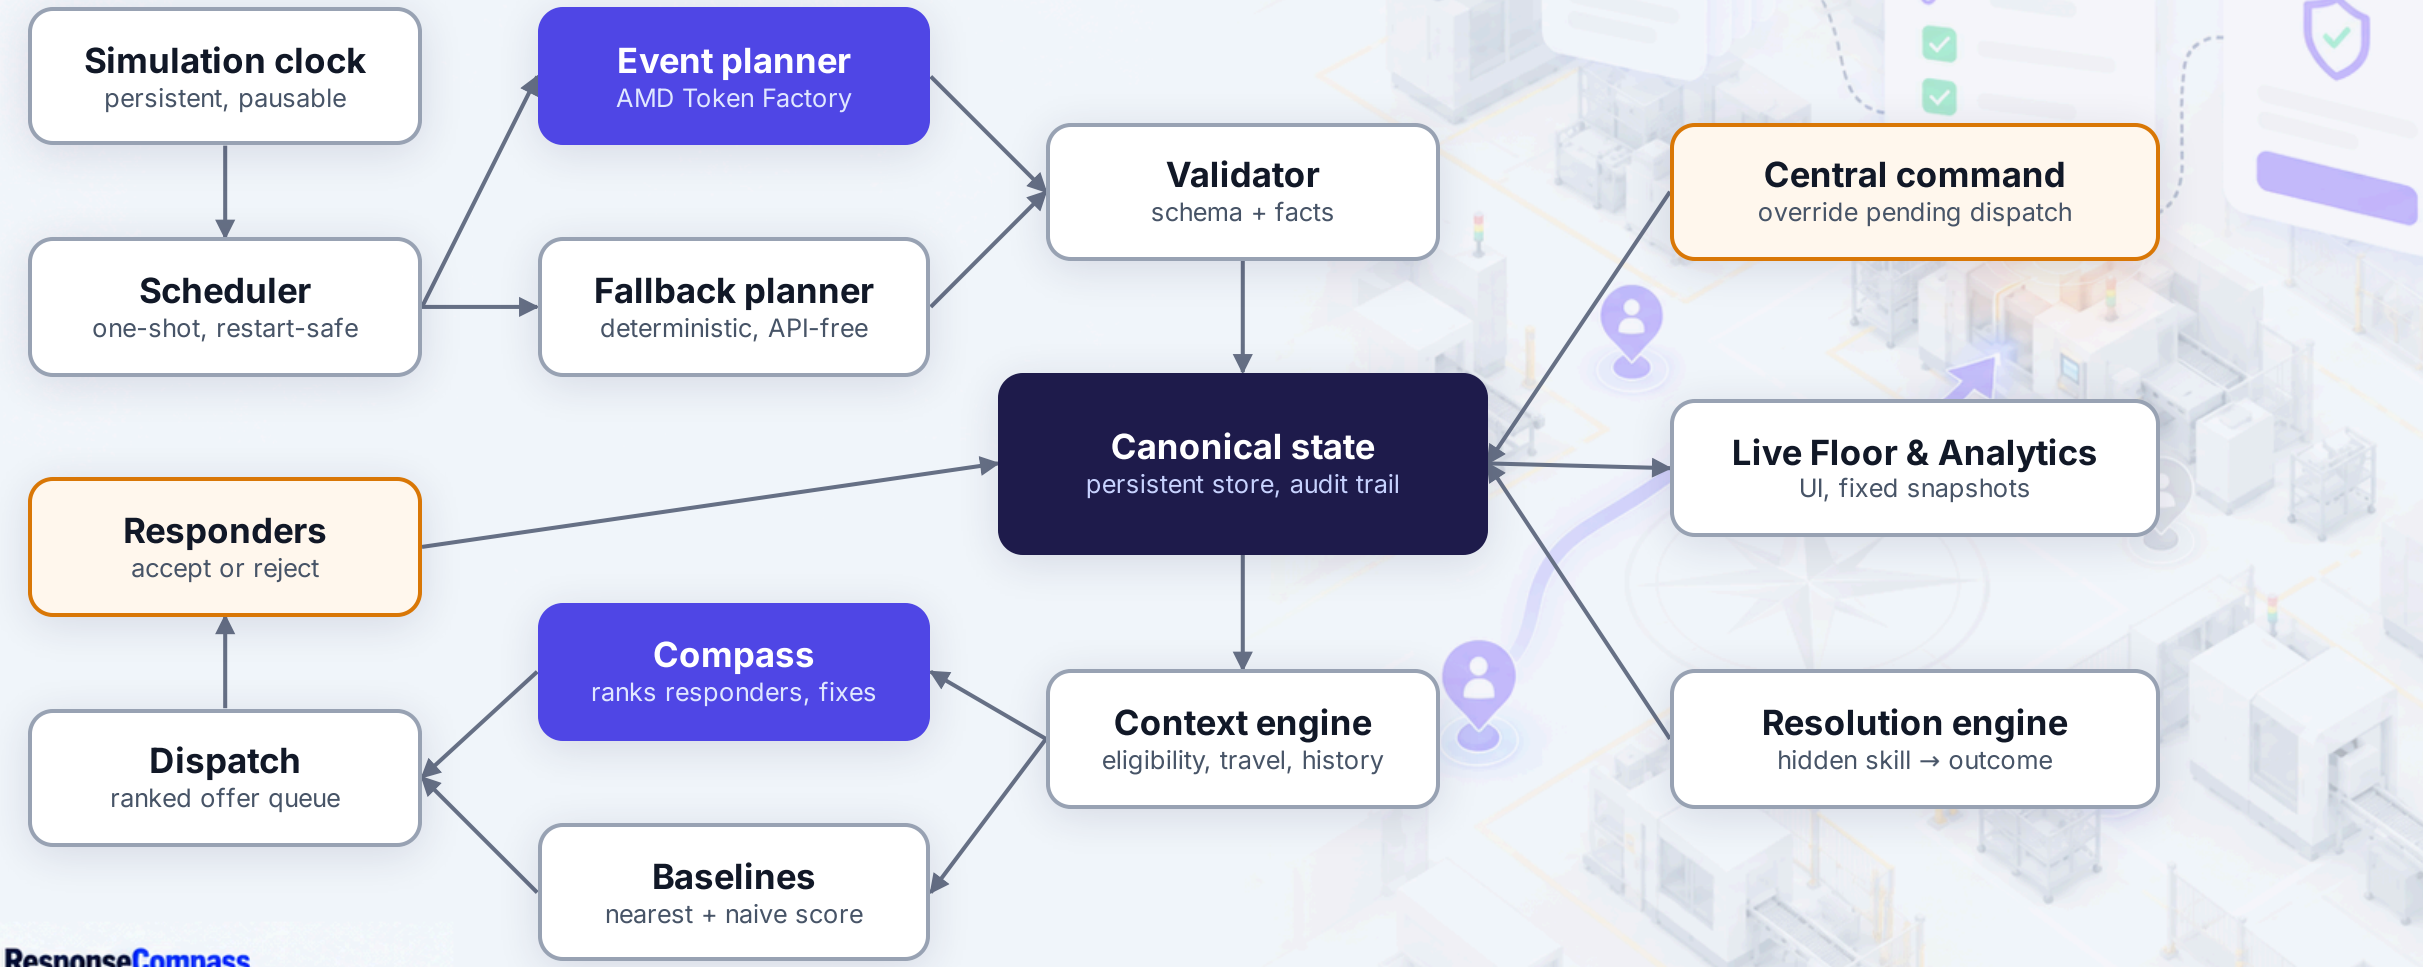

ARCHITECTURE

Application code | AMD model | Store | People

Code owns the facts. Models only rank.

Application code owns time, facts, eligibility, baselines and every mutation; models only propose.

ResponseCompass
AI dispatch guidance for operations control rooms

TRUST

Honest by design

Hidden truth

True skill and true fault cause stay hidden from every model, screen and chart.

Outcomes from truth

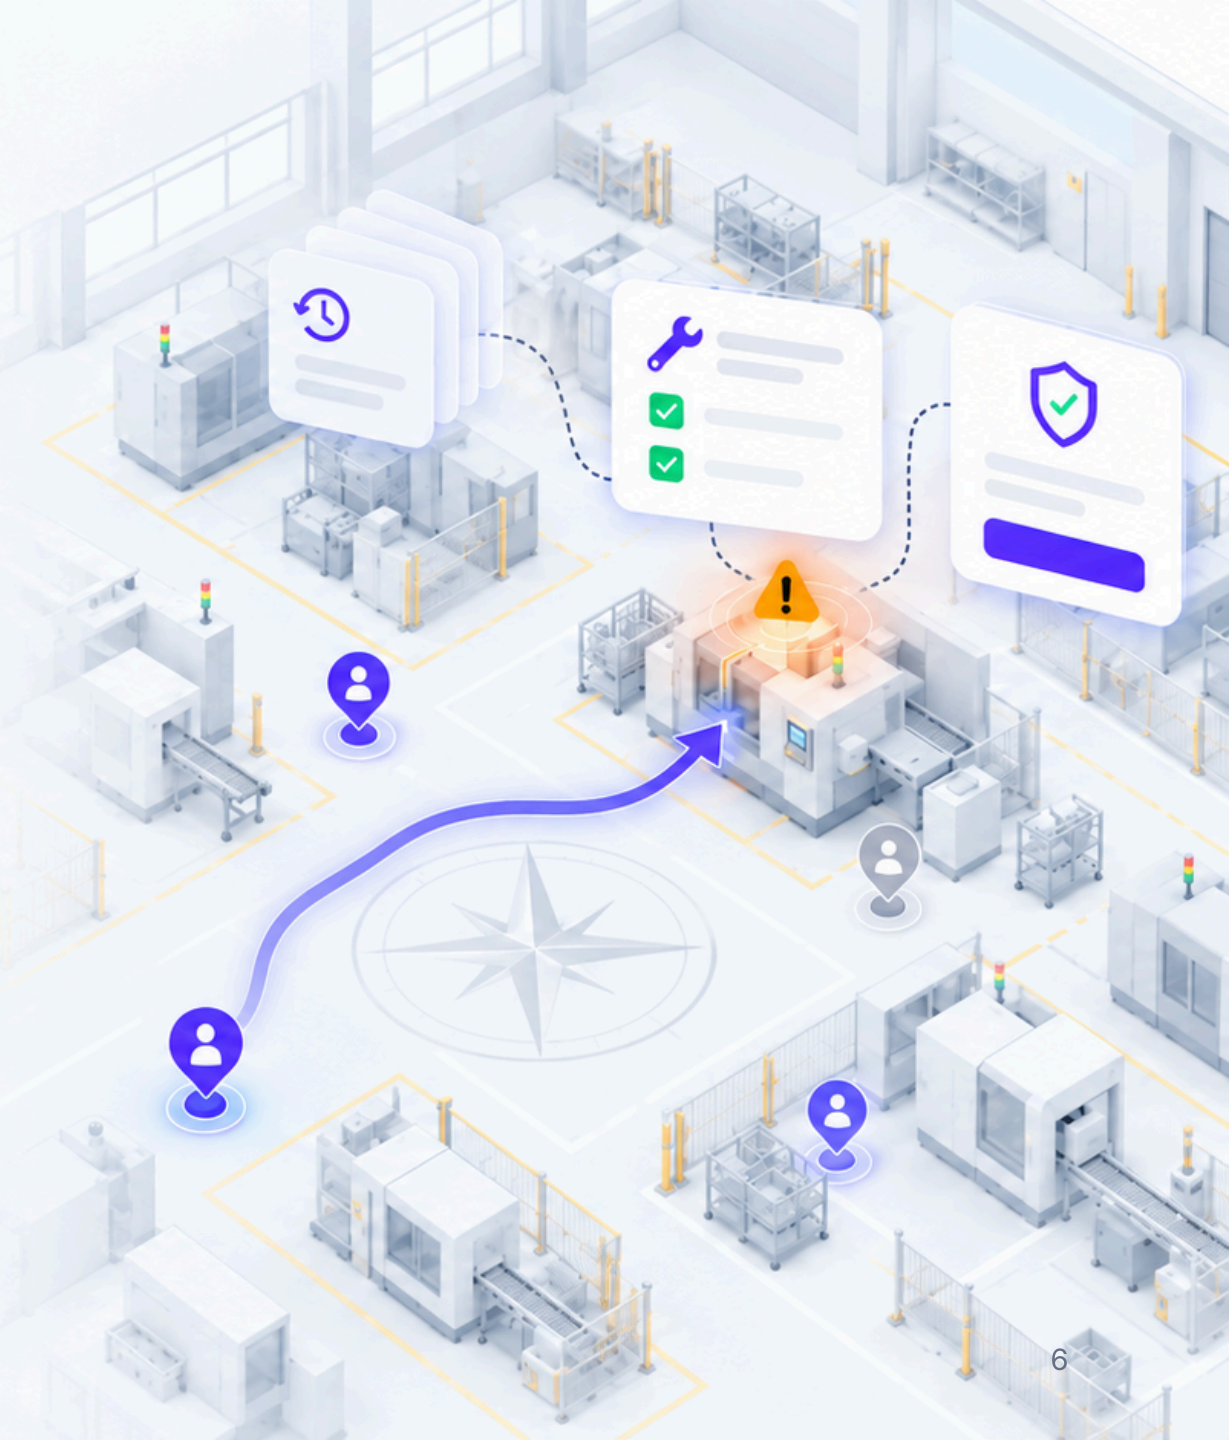

Repairs succeed or fail from that hidden truth, not from what a model claims.

Baselines alongside

Nearest, naive score and most common fix run next to Compass; disagreements are recorded.

Fair analytics

Denominators shown, thin samples suppressed, no leaderboard. Pay, seniority and HR data are never inputs.

LIVE CAPTURE

The right responder

ISS-3618, Station 48 · ranked live on AMD Token Factory (MiMo-V2.6-Flash)

NEAREST-RESPONDER BASELINE

26

similar cases · Engr361, 0.5 min away

COMPASS ON AMD

110

similar cases, 87% success · Engr370, 0.5 min away

4× the record

Same half-minute trip. The offer went out automatically; central command could override it.

Initial assignment Compass analysis

Engr370 was ranked first.

Engr370 combines the deepest issue-specific history, the most reliable evidence, and the best observed balance of success and limited reopens, while still requiring only a modest trip relative to the alternatives.

Eligible responder evidence

Candidate	Solo / assisted	Evidence weight	Strength	Median	Success	Travel
1. Engr370	17 / 93	62.9	STRONG	8.8 min	87% (n=62.9)	0.5 min
2. Engr361	3 / 23	10.4	STRONG	13.9 min	83% (n=10.4)	0.5 min
3. Tech374	0 / 7	4.1	MODERATE	12.1 min	66% (n=4.1)	1.8 min

LIVE CAPTURE

The right fix

Same record: Compass ranks the troubleshooting procedures for the observed symptom

7.0 min

fixed first time with the top-ranked procedure

01 Evidence from code

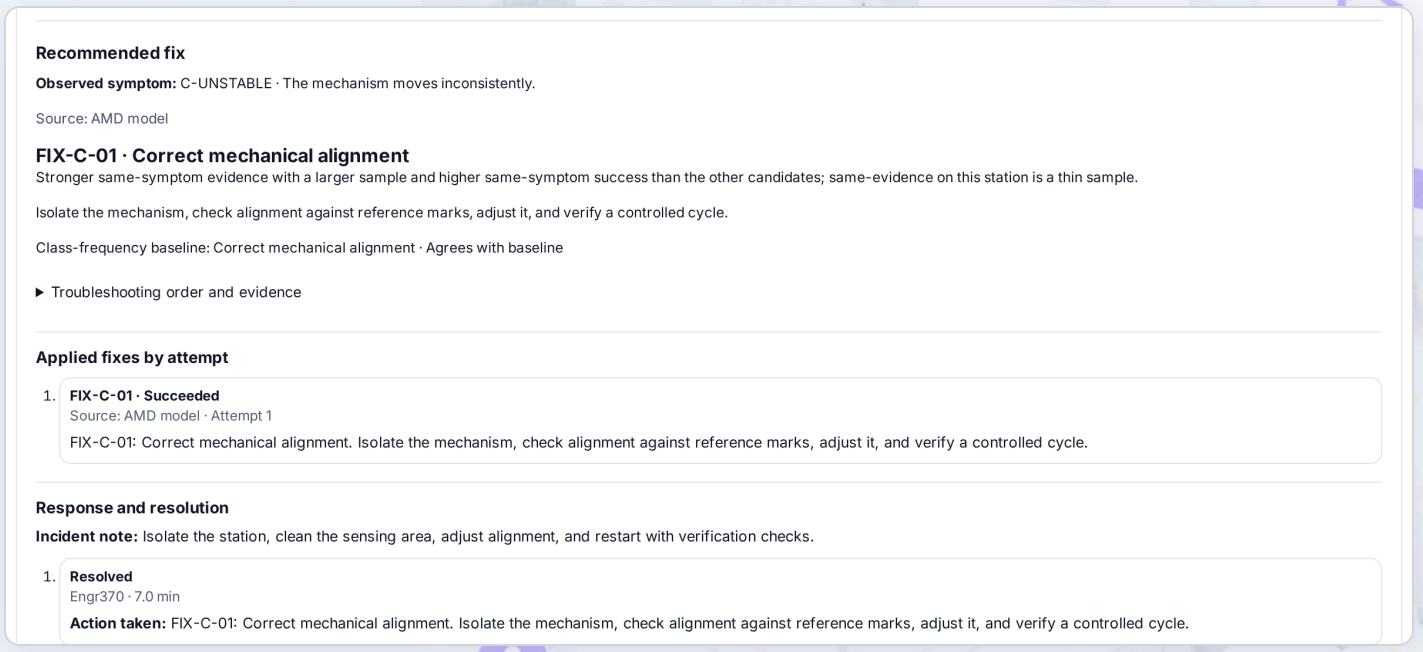

Procedures and observed success.

02 Compass ranks

Mechanical alignment came first.

03 Fail, then next

A failed attempt reopens the issue.

Agrees with the baseline

The most common fix for this symptom also came first; disagreements are recorded.

STAFFING

Overtime, decided by people

Nothing changes until central command approves; unanswered recommendations expire.

Backlog review → Lawful options only → Compass ranks → Command approves

01 Legal limits first

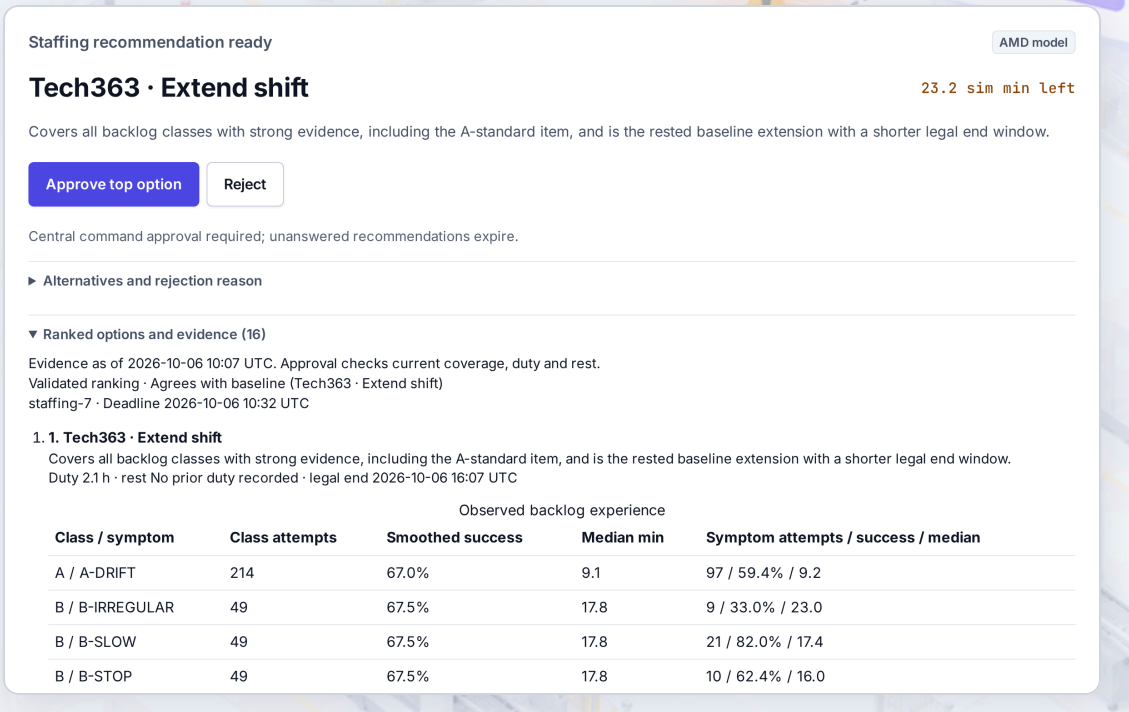

16 h duty, 12 h rest and the staffing cap, checked in code.

02 Ranked by coverage

Observed coverage of the backlog; first-eligible is the baseline.

03 Audited decisions

Every approval or rejection, and who made it, is recorded.

Staffing recommendation ready

AMD model

Tech363 · Extend shift

23.2 sim min left

Covers all backlog classes with strong evidence, including the A-standard item, and is the rested baseline extension with a shorter legal end window.

Approve top option | Reject

Central command approval required; unanswered recommendations expire.

▸ Alternatives and rejection reason

▾ Ranked options and evidence (16)

Evidence as of 2026-10-06 10:07 UTC. Approval checks current coverage, duty and rest.
Validated ranking · Agrees with baseline (Tech363 · Extend shift)
staffing-7 · Deadline 2026-10-06 10:32 UTC

1. **1. Tech363 · Extend shift**
   Covers all backlog classes with strong evidence, including the A-standard item, and is the rested baseline extension with a shorter legal end window.
   Duty 2.1 h · rest No prior duty recorded · legal end 2026-10-06 16:07 UTC

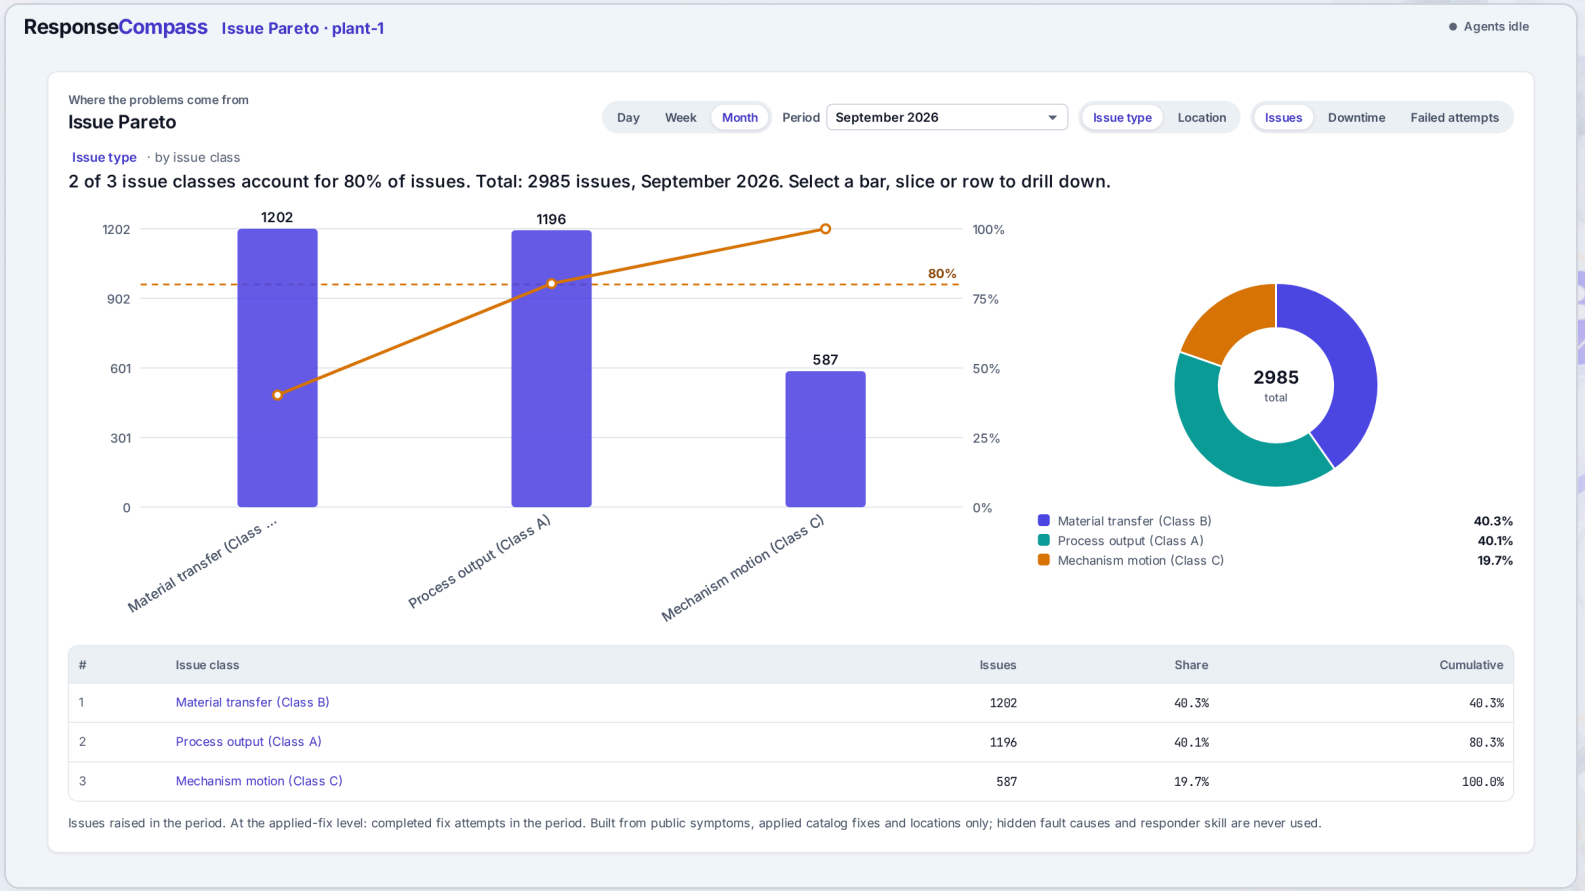

Observed backlog experience

Class / symptom	Class attempts	Smoothed success	Median min	Symptom attempts / success / median
A / A-DRIFT	214	67.0%	9.1	97 / 59.4% / 9.2
B / B-IRREGULAR	49	67.5%	17.8	9 / 33.0% / 23.0
B / B-SLOW	49	67.5%	17.8	21 / 82.0% / 17.4
B / B-STOP	49	67.5%	17.8	10 / 62.4% / 16.0

ISSUE PARETO

Where the downtime comes from

Issue class → observed symptom → applied fix, or floor → station

Three measures

Issues, downtime or failed attempts, by day, week or month.

The vital few

Sorted bars, cumulative line and an 80% marker.

Drill down

Class to symptom to the fix that was applied.

Public records only

Hidden causes are never used.

RESULTS

A month of operations

e8-aura-p1, simulated 1 September to 6 October

3,512

issues in the month-long history

73.5%

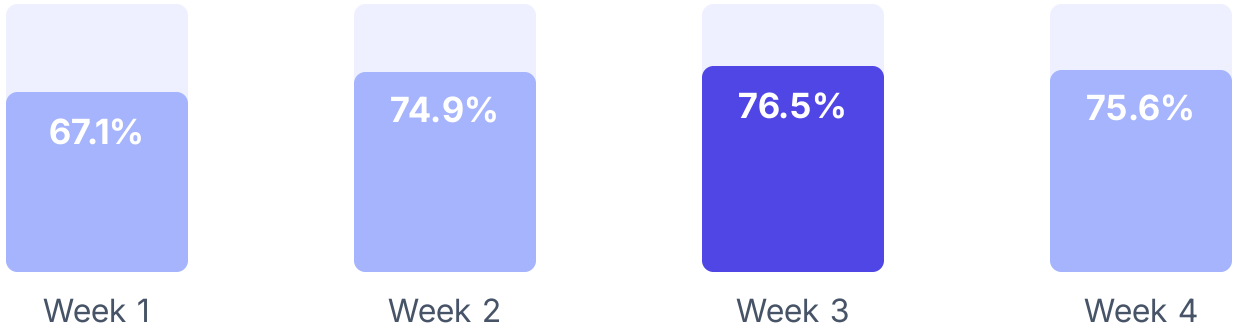

first-time fix in September (1,858 of 2,527)

2,966 / 2,985

issues raised / resolved in September

First-time fix by week, September

Rose, then dipped: not a steady climb. Bars on a full 0–100% track.

How it was made

Generated with the app's own engine, offline, with deterministic fallbacks. Every record is one the app would produce; it is not an AMD-only benchmark. Weeks start Monday 08:00 UTC.

INFERENCE

Built on AMD Token Factory

MiMo-V2.6-Flash ranks responders, fixes and overtime; the event planner can use another model.

9 / 10
valid responder rankings in the recorded MiMo check

10 / 10
valid event plans in the same check

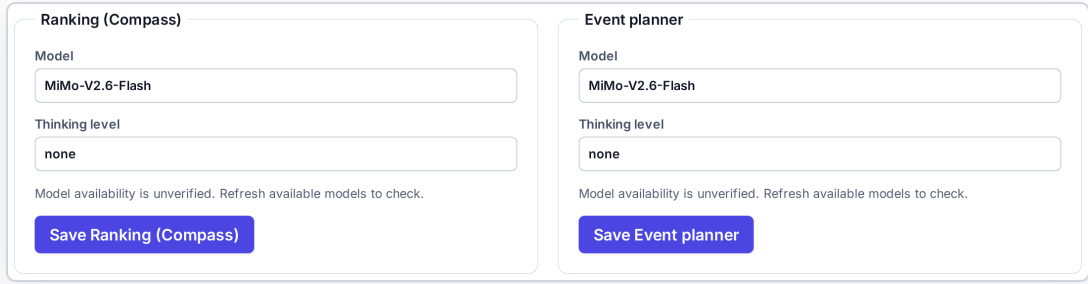

10 / min
local request budget, 2 concurrent

01 **Validators are the contract**
OpenAI-compatible JSON, checked by code.

02 **Bounded failure**
Two retries on 429 only, then a circuit breaker.

03 **Never holds the clock**
Model calls run in a background lane.

Each role picks its own model

BUILT TO RUN

Engineering quality

334

hermetic unit and integration tests

72

Chromium end-to-end tests

01 **One app, two modes**

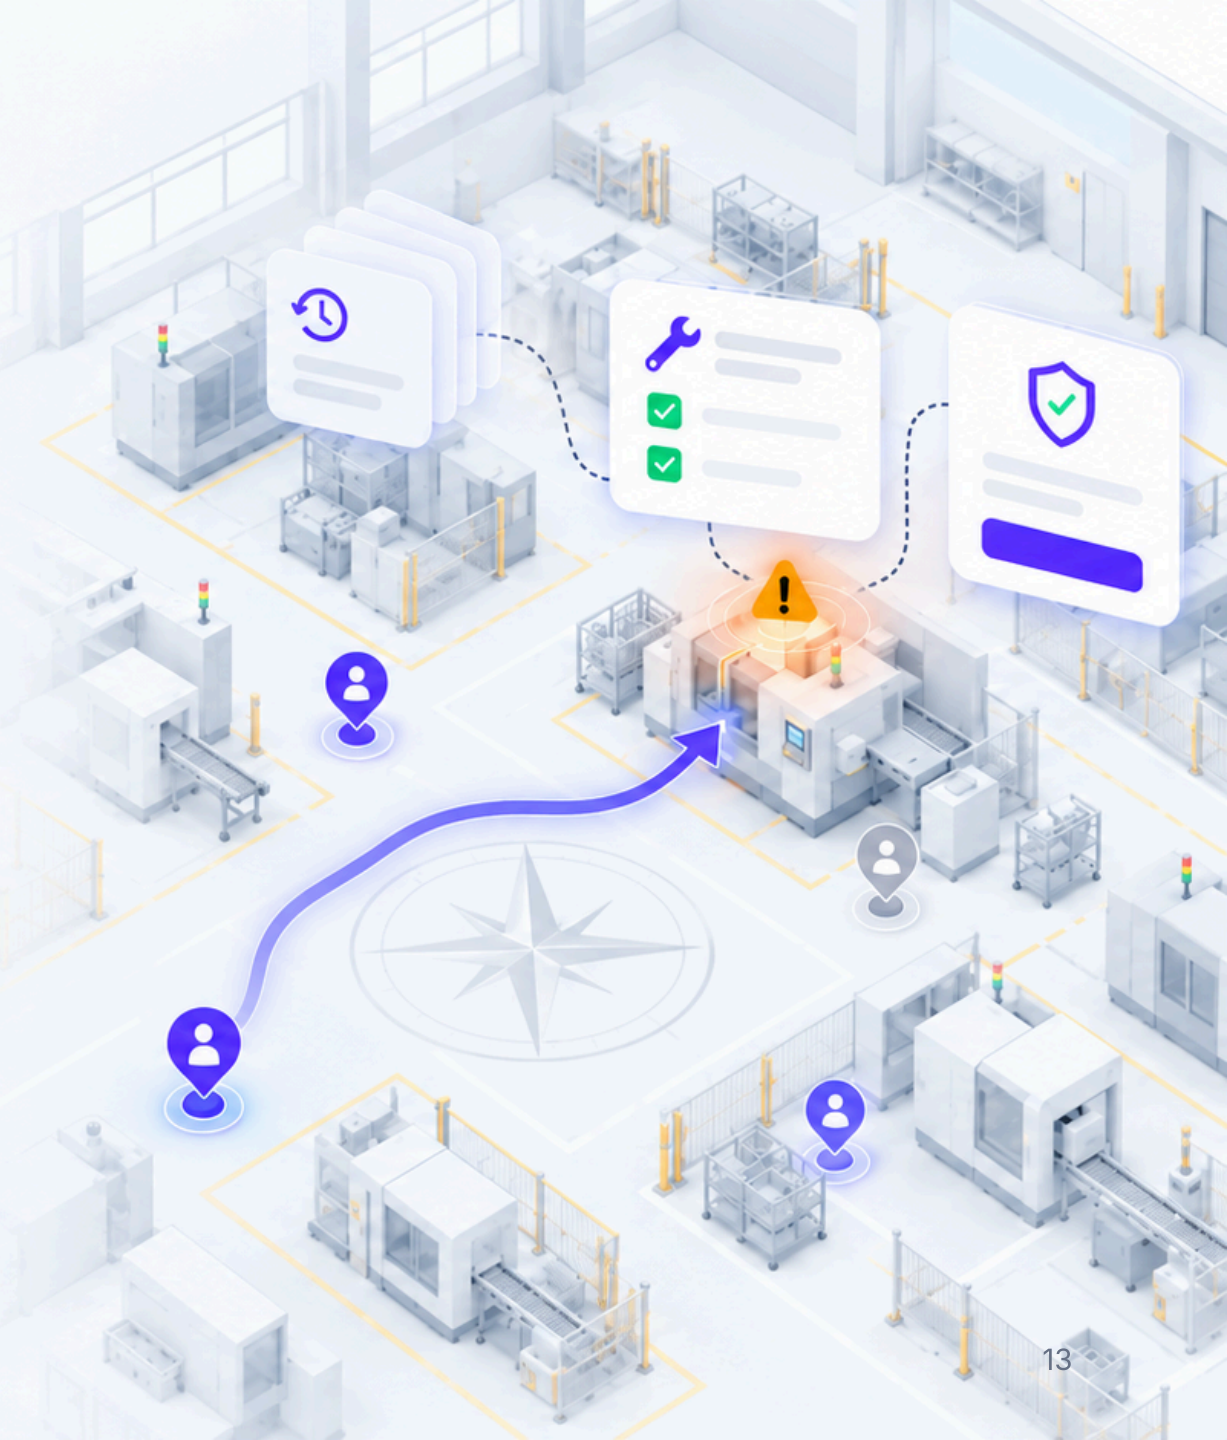

Offline makes no API calls and is fully reproducible.

02 **Crash-safe state**

Checksummed journal and a restart-safe scheduler.

03 **Spend only when watched**

An unattended room pauses itself after 10 idle minutes.

ROADMAP

What's next

01 **Real systems**

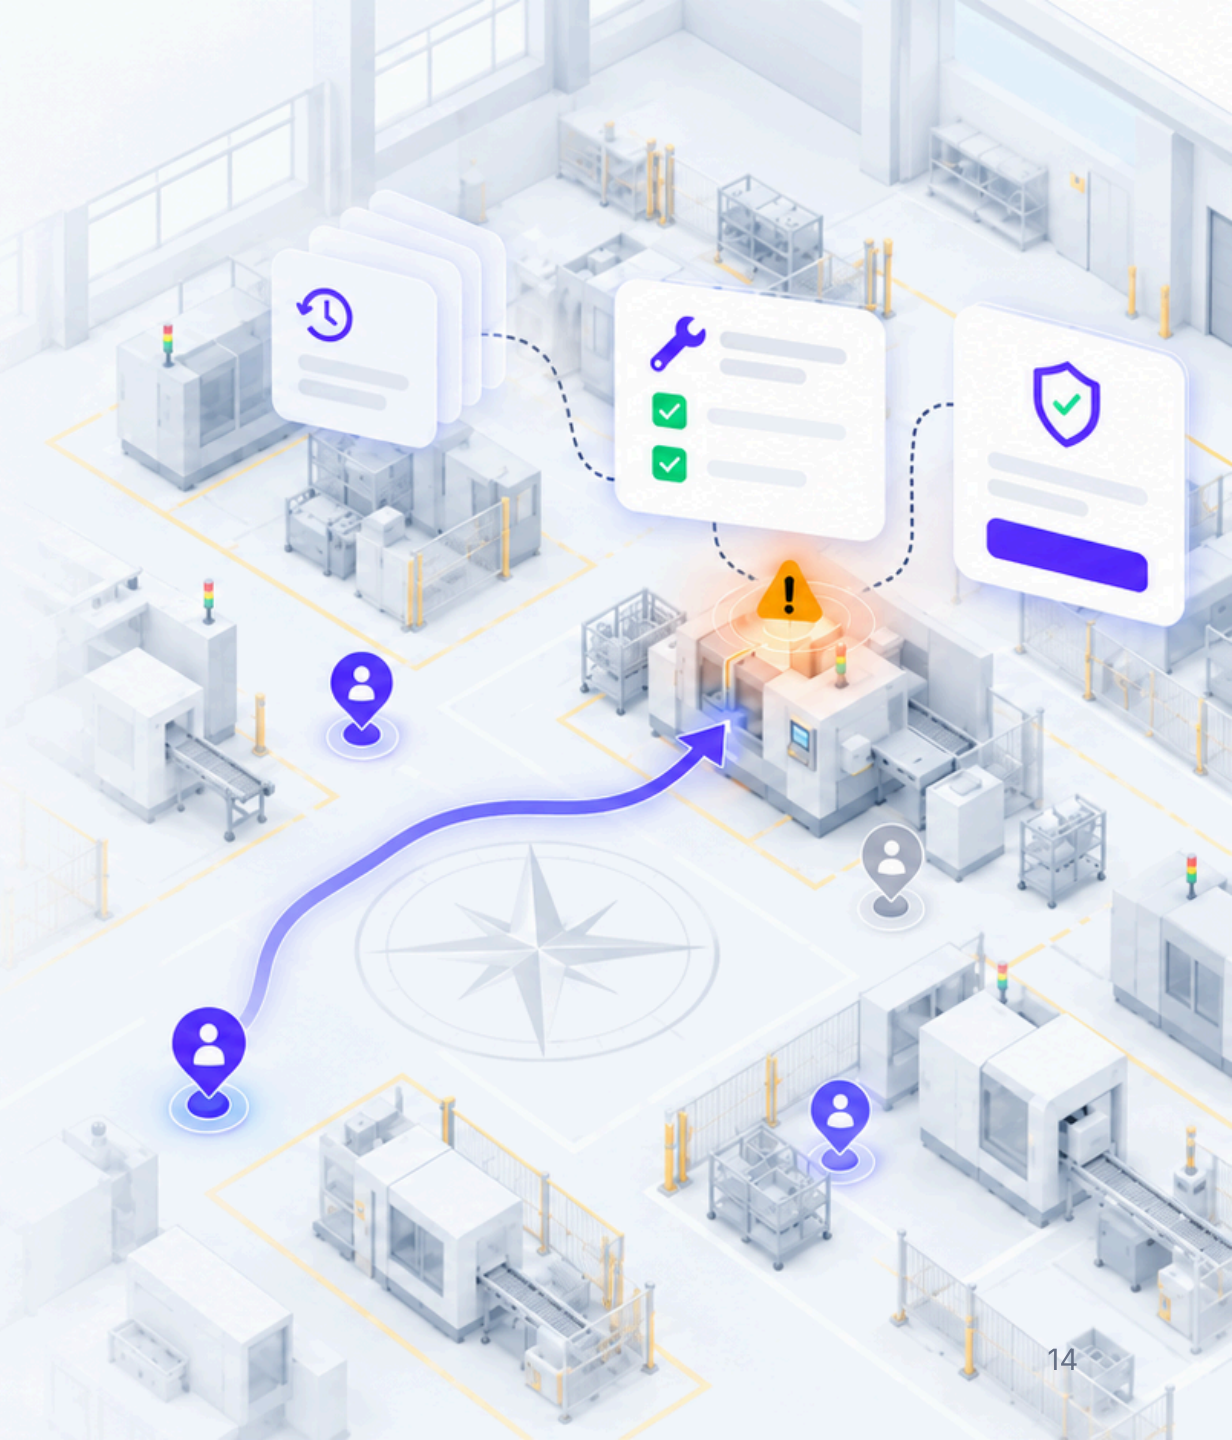

Maintenance, ticketing and rostering in place of the simulated floor.

02 **Learn from approvals**

Feed operator decisions and outcomes back into the evidence.

03 **Longer live measurement**

Compass against its baselines on live AMD rankings.

The right responder. The right fix.

Runs autonomously. Supervised by your control room.

Built on AMD Token Factory.
